This 8-hour course is designed for any responder (fire/EMS/police/HazMat Tech/EOD Tech) on the scene of a typical incident, that discovers explosive materials or products that are used to make explosives. Utilizing the information covered in our Above the Line/Below the Line and AdvancedIQ courses, along with a custom HME chart, students will learn to categorize explosive chemical families and the potential products produced when combining these chemicals together. The day concludes with practical exercises, using the system, charts, and detection, monitoring, and chemical identification (FTIR, Raman) equipment.

Topics Covered:

- Refresher of the HazMatIQ Above the Line/ Below the Line System
 - Previous HazMatIQ training is NOT required
- Prevalent explosives and chemical precursors
- Explosives In Transportation
- Choosing the correct PPE when responding to explosives incident
- Meters/Air Monitoring Equipment
- Interactive discussion, using real life scenarios
